MANSORA

Sales & Stock platform

Internal pricing decision brief

Market scan checked 14 November 2026

THE QUESTION FOR THE TEAM

What should Mansora Sales & Stock cost - and what must justify that price?

Basic POS and stock tracking are already cheap in Ghana. The price case for Mansora is stronger when we sell the owner-control layer: fewer blind spots around cash, credit, Mobile Money, staff activity, stock movement and day-end reporting.

Small Ghanaian shops | Provisions | Retail | Wholesale | Cedi billing | Local support

Pricing signal

Public Ghana-focused POS entry plans commonly sit around **GH₵90-150/month**. Fuller operating tiers often move into **GH₵150-300+**, while premium products can reach GH₵299-599+.

That makes the earlier **GH₵129 / 229 / 399** idea credible - but the top tier needs enough real value to support the premium.

What customers are really paying us to solve

- **Continuity:** the till keeps selling offline and syncs later.
- **Accountability:** named logins, audit history, discounts, refunds and shift cash differences make mistakes and theft easier to spot.
- **Credit control:** who owes what, repayments, customer statements and reviewed WhatsApp debt reminders.
- **Money checks:** Mobile Money/card closing checks plus bank and MoMo statement import in the launch scope.
- **Stock control:** low-stock alerts, supplier reorder lists, purchases, adjustments and phone-camera counts.
- **Owner visibility:** daily summary email, sales/payment/stock/expense/gross-profit reports, backups and full exports.

What is not yet a strong reason to charge more

Several competitors already offer selling, inventory, basic reports and offline mode at low prices. We should not position Mansora as “just another POS”.

- **Multiple tills / branches:** coming soon.
- **VAT receipts:** coming soon.
- **Automatic Mobile Money debits:** not part of the offer; MoMo is pay-per-invoice.
- **Silent receipt printing in the Windows app:** coming soon.

Implication: do not let the Plus price depend mainly on features that are still coming.

Current market snapshot

Public list prices; package limits and tax treatment vary.

Provider	Entry	Next / core tier	What the market is offering
HilsonPOS	**GH₵90**	**GH₵149 / 249**	Offline till, MoMo, stock, purchases, expenses and support; higher tiers add branches/accounting.
SellarPro	**GH₵99**	**GH₵150 / 250**	Offline selling, inventory, reports, roles/permissions and Ghana-based support.
Retill	**GH₵99**	**GH₵199 / 299**	Mobile + web, inventory, staff roles, backups and broader branch capacity on higher tiers.
Ventrix RMS	**Free**	**GH₵150**	Free owner-only tier; Plus adds unlimited catalogue, exports, shifts, expenses and audit logs.
Obali	**Free**	**GH₵100 / 150**	Low-cost Ghana offer with offline checkout; paid tiers add staff, credit, expenses and daily reports.
Vemli POS	**From GH₵149**	**Higher tiers**	Offline selling, MoMo, inventory, staff controls, local setup/training and optional advanced modules.
AstraPOS	**GH₵299**	**GH₵499**	Premium local positioning with MoMo, dashboard, multiple cashiers/branches and support.
RetaillyPOS	**GH₵299**	**GH₵599 / 999**	Broader retail suite including purchases, finance, banking and multi-branch features.

GH₵90-150

Price-sensitive entry zone. Customers can find credible alternatives here.

GH₵129-229

Good Mansora zone if we lead with control, support and onboarding - not only POS.

GH₵300+

Needs a clear premium story: branches, VAT, deeper finance or high-touch service.

Why Mansora can sit above the cheapest tools

The strongest difference is not the checkout screen. It is the combination of **named accountability, shift cash checks, credit control, supplier/reorder workflow, owner summaries, MoMo checks, statement import, audit history and assisted local onboarding**. That is a clearer business-control story than “POS + stock”.

Why we should not start too high

A shop owner can already find credible Ghana-focused systems below GH₵150. Mansora must first earn proof through pilots, references and reliable support. **The Business plan should feel like the obvious upgrade from a notebook - not a software luxury.**

Research note: Competitor prices above are public web prices checked on 14 November 2026. They are useful market signals, not audited quotations. Providers can change plans, limits, taxes or promotions.

MANSORA

Sales & Stock platform

Pricing recommendation

For team discussion - not customer-facing

RECOMMENDED DIRECTION

Price for adoption, but protect the value of local support.

Mansora should sit above the cheapest "just sell and track stock" tools, but below a full ERP-style promise until branches and VAT receipts are live.

Balanced launch model

Keep **Starter at GH₵129** and **Business at GH₵229**. These sit inside the live market while giving Mansora room to provide onboarding and human support. Keep **Plus at GH₵399** as the future premium anchor, but do not make it the main selling plan until multi-till/branch and VAT receipt features are ready.

Lead with Business

It contains the features that most directly answer the owner's pain: staff accountability, credit, supplier/reorder workflows, reporting, daily summary and MoMo checking.

Three pricing choices for the team

A. Penetration

99 / 179 / 299 GHS per month

Best if the immediate goal is rapid adoption and references. Easier against low-cost competitors, but leaves less room for support and may be harder to raise later.

Fastest adoption

B. Balanced - recommended

129 / 229 / 399 GHS per month

Competitive entry, stronger Business value, and a premium anchor for the roadmap. Best fit if Mansora wants to be affordable but not bargain software.

Best balance

C. Service-led premium

149 / 249 / 449 GHS per month

Works only if assisted onboarding, training and responsive support are consistently bundled and customers feel the service difference.

Higher support margin

Recommended package shape if Option B is chosen

Starter

GH₵129 / month

- 1 till
- Sales and receipts
- Products, prices and barcodes
- Stock, counts and low-stock alerts
- Basic sales/stock visibility
- Product import, backups and exports

Business

GH₵229 / month

- Everything in Starter
- Named staff logins and cashier shifts
- Customer credit, repayments and WhatsApp reminder drafts
- Suppliers, purchases and reorder list
- Expenses, profit and broader reports
- Daily summary email
- MoMo/card check + bank/MoMo statement import

Plus

GH₵399 / month

- Everything in Business
- Priority support
- Designed as the growth tier
- More tills / branches
- VAT receipts

Coming soon: more tills / branches + VAT receipts

How it should be sold

1. **Find the leak** - Ask about cash shortages, credit, MoMo mismatches and missing stock.
2. **Demo the control** - Show shift differences, credit balances, reorder lists and owner reports.
3. **Set it up** - Import the product list, configure staff and train the team.
4. **Default to Business** - Use Starter as the price-sensitive fallback, not the hero plan.
5. **Retain locally** - Monthly support, easy payment and an owner who knows who to call.

Billing: card can be automatic; Mobile Money is paid per invoice. Keep yearly billing at **2 months free** - a familiar market incentive.

Setup fee: keep it, but sell the service

A naked GH₵400 "setup fee" can create friction because several competitors advertise no setup fee, free trials or free data import.

- → **Rename it:** Assisted onboarding & training - GH₵400.
- → **Include:** product import, staff setup, permissions, training and first closing check.
- → **Waive it:** for pilot shops and consider waiving it on annual Business/Plus.
- → **Do not compete on free forever:** Mansora's model depends on support and dependable operations, not only software access.

Decision to make now

Recommended: approve GH₵129 Starter and GH₵229 Business for launch; keep GH₵399 Plus as the premium roadmap price; keep 2 months free annually; keep GH₵400 assisted onboarding but waive it for pilots.

What would make us revisit price?

After the pilot, review: close rate, support time per shop, willingness to pay for Business, how often customers ask for branches/VAT, churn risk, and whether the system is preventing enough day-to-day loss or admin work to make the subscription feel obvious.
